No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                      homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

J Biol. Chem. 269:19088-19094(1994).
J Biol. Chem. Active toward esters of long-chain and very-long chain
-!- FUNCTION: Active toward esters of and stearcyl-CoA.
fatty acids such as palmitcyl-CoA and stearcyl-CoA.
-!- CATALYTIC ACTIVITY: Acyl-CoA + ETF = 2,3-dehydroacyl-CoA + reduced
                                                                                                                                                                                                                     -i- SUBCELLULAR LOCATION: Mitochondrial inner membrane.
-i- MISCELLANEOUS: A number of straight-chain acyl-CoA dehydrogenases of different substrate specificities are present in mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |||||||

Submitted (NOV-1995) to the EMBL/GenBank/DDBJ databases.
-1- FUNCTION: Active toward esters of long-chain and very-long chain
fatty acids such as palmitoyl-CoA and stearoyl-CoA.
-1- CATALYTIC ACTIVITY: Acyl-CoA + ETF = 2,3-dehydroacyl-CoA + reduced
                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- SUBUNIT: Homodimer (By similarity)
-!- SUBCELLULAR LOCATION: Mitochondrial inner membrane.
-!- MISCELLANEOUS: A number of straight-chain acyl-CoA dehydrogenases of different substrate specificities are present in mammalian
                                                                                                            Cox K.B., Johnson K.R., Wood P.A.; "Chromosomal locations of the mouse fatty acid oxidation genes Cptla, Cpt2, Acadu, and metabolically related Crat gene."; Mamm. Genome 9:608-610(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mitochondrion (By similarity).
Acyl-CoA dehydrogenase, very-long-chain specific.
                                                                                                                                                                                                                                                                                                                                                                                                              -!- PATHWAY: Mitochondrial fatty acid beta-oxidation system; first
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SIMILARITY: Belongs to the acyl-CoA dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL; 2/113; CAMA91512; ...

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                310 GTGGACTCCCGAAAATTGACCAGGAAGGGAAAATCCCCAGATGAAACTTTGGAGAAATTG 369
Zhang X., Liu W., Zhu H., Sun X.;
Submitted (JUN-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Active toward esters of long-chain and very-long chain fatty acids such as palmitoyl-CoA and stearcyl-CoA.
-!- CATALYTIC ACTIVITY: Acyl-CoA + ETF = 2,3-dehydroacyl-CoA + reduced
                                                                                                                                                                                                                                                                                                                                       SUBÜNIT: Homodimer (By similarity).
SUBCELLURAR LOCKTION: Mitcochoditial inner membrane.
MISCELLANBOUS: A number of straight-chain acyl-CoA dehydrogenases of different substrate specificities are present in mammallan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       250 GATGAACTTAATGAAATCAATCAGTTCTTGGGACCCGTGGAAAAATTCTTCACTGAAGAG

CoA dehydrogenase deficiency (VLCAD deficiency) [MIM:201475].
VLCAD deficiency is an autosomal recessive disease which leads to impaired long-chain fatty acid beta-oxidation. It is clinically heterogenous, with three major phenotypes: a severe childhood form, with hater onset, usually with hypoketotic hypoglycemia as the main presenting feature, owith hypoketotic hypoglycemia as the main presenting feature, low mortality, and rare cardiomyopathy; and an adult form, with isolated skeletal muscle involvement, rhabdomyolysis, and muscle involvement, rhabdomyolysis, and muscle involvement, rhabdomyolysis, and myoglobinuria, usually triggered by exercise or fasting.

-!- MISCELLANEOUS: A number of straight-chain acyl-CoA dehydrogenases of different substrate specificities are present in mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright.
